

Network / Systems Engineer

***** Must have TS / SCI with Polygraph to be considered for this opportunity. *****

As our Network / Systems Engineer you will use your network engineering experience to assess / implement physical servers and manage virtualized infrastructure. As new systems are developed and deployed your work will ensure integration of the entire systems or subsystems. You will plan coordinate, and implement network security measures to protect data, software, and hardware.

To be considered you will have experience with most if not all of the following:

- Knowledge of network design, LAN/WAN protocols, network troubleshooting, network switching and network equipment, including routing, switching, and hardware infrastructure
- Strong knowledge of Active Directory, DNS and Windows 2003 server or later
- Windows, Linux and UNIX operating systems and architectures.
- Exposure to and understanding of VMware ESX Servers, Vmotion, Cloning, network configuration, storage configuration.

Required Education:

- Bachelor's Degree or higher in IT related field of study with at least 4 years applicable experience.
- MCSE is a plus!

For immediate consideration please submit resumes to:
